TO RESTORE THE BALANCE

Few therapeutic procedures can be used with such precision and with such assurance of benefit as the modern treatment of diabetes mellitus. Not only can the degree of defect in the metabolic capacity of the diabetic be readily determined, but it is easy to increase the patient's capacity if desirable. If his own supply of insulin is insufficient to support the normal metabolic load, it can be made adequate by supplementing with Insulin administered hypodermically.

For prompt effect—

Iletin (Insulin, Lilly), 40 and 80 units per cc.

For sustained effect—

Protamine, Zinc & Iletin (Insulin, Lilly), 40 and 80 units per cc.

Intermediate effects may be obtained by suitable admixtures of Insulin and Protamine Zinc Insulin.

pH

the measure of resistance to vaginal infection

FLORAQUIN POWDER
— for office insufflation

FLORAQUIN TABLETS
— for patient's use

SEARLE

RESEARCH IN THE SERVICE OF MEDICINE

FLORAQUIN AND DIODOQUIN ARE THE
REGISTERED TRADEMARKS OF S. D. SEARLE
& CO., CHICAGO 90, ILLINOIS

Characteristic of the normal adult vagina is the pH which ranges between 3.8 and 4.4. This acid level is resistant to pathogenic bacteria, protozoa and fungi. In such a medium the Döderlein bacillus flourishes and aids in the production of lactic acid.

FLORAQUIN — a product of Searle Research — aims at restoring and maintaining a vaginal environment inimical to the growth of pathogenic flora. Floraquin not only contains Diodoquin-Searle (5, 7-diiodo-8-hydroxyquinoline) but also supplies adequate lactose, dextrose and boric acid for reestablishing a normal vaginal pH; therefore, a normal vaginal physiology.

WHEN interviewed between platefuls, this 11-months-old young man emphatically stated: "I have been brought up on Pablum and still like it, but some days when I'm in the mood for oatmeal, nothing satisfies me like Pabena!"

*Nutritious, quick and easy to prepare,
both products are for sale at drug stores.*

MULSAVITE

CAPSULES®

therapeutic potency multivitamins

"We eat what we choose or must, not according to the National Research Council."¹ But we can *treat* the resulting vitamin deficiencies as we choose, *and* in exact accordance with F.D.A. nutritional standards.

Sharp & Dohme has used exactly 5 times the F.D.A. minimum daily vitamin requirements as the basis of MULSAVITE² Capsules Therapeutic Potency Multivitamins:

	MULSAVITE Capsules	F.D.A. Requirements
Vitamin A	20,000 units	4,000 units
Vitamin D	2,000 units	400 units
Thiamine hydrochloride	5 mg.	1 mg.
Riboflavin	10 mg.	2 mg.
Pyridoxine hydrochloride	1 mg.	•
Calcium pantothenate	10 mg.	•
Niacinamide	50 mg.	•
Ascorbic Acid	150 mg.	30 mg.
Mixed tocopherols	10 mg.	•

• No daily requirement established

Jolliffe and Smith stress that "The daily therapeutic dose of vitamins should be at least five times the maintenance requirements. Since they can be given in amounts many times the maintenance requirements without untoward effect, it is better to give too much than too little."³

MULSAVITE Capsules are indicated for treatment of concurrent multiple vitamin deficiencies. The dose is one capsule or more daily. Bottles of 30 and 500 easily swallowed capsules. Sharp & Dohme, Philadelphia 1, Pa.

MULSAVITE

In the Conservative Treatment of
The Lumbosacral and Lower Lumbar Regions

CAMP SUPPORTS offer advantages

...Give firm support to the low back; the support is easily intensified by re-inforcement with pliable steels or the Camp Spinal Brace.

...Afford a more stable pelvis to receive the superincumbent load.

...Allow freedom for contraction of abdominal muscles under the support in instances of increased lumbar curve (fig. 1).

...Are removed easily for prescribed exercises and other physical procedures prescribed by physiatrist or physician.

FIGURE 1 — Patient — thin type of build with beginning faulty body mechanics. The Camp adjustment provides a more stable pelvis, allowing patient to "draw in" the abdominal muscles, thus gradually acquiring a gentle lumbar curve.

FIGURE 2 — Patient — intermediate type of build. Strain of lumbosacral joint predisposes to other strains. For protection of the joints in the lumbar region from recurrent strain and also as an aid in relieving the pain of acute conditions, Camp lumbosacral supports have proved effective.

Experience is the Best Teacher

Charles Edouard Brown-Séquard

(1817-1894)

proved it in neurology

Dr. Brown-Séquard's studies established him as a founder of modern neurology. His experiments included transection of the spinal cord, a series on the knee jerk, epilepsy, and the vasomotor function of the sympathetic nerve.

Experience is the best teacher in cigarettes, too

YES! Millions of smokers who have tried many different brands of cigarettes found from experience that Camels suit them best. As a result, more people are smoking Camels than ever before. Try Camels! See how *your* taste appreciates the rich flavor of Camel's choice tobaccos. See if *your* throat doesn't welcome Camel's cool mildness. Find out for yourself why, with millions of smokers, Camels are the "choice of experience."

R. J. Reynolds Tobacco Co.
Winston-Salem, N. C.

According to a Nationwide survey:
MORE DOCTORS SMOKE CAMELS
than any other cigarette

Three independent research organizations in a nationwide survey asked 113,597 doctors to name the cigarette they smoked. More doctors named Camel than any other brand.

enlarging the scope of an established antibiotic

PROCAINE
PENICILLIN G
CRYSTALLINE

Pfizer

EVER since Penicillin was first produced, one of the important phases of Pfizer research has been the development of new dosage forms which would enlarge the scope of usefulness of this important antibiotic.

One of the more noteworthy of these developments has been Procaine Penicillin G Crystalline-Pfizer. The medical profession has given this recently-developed salt a consistently favorable reception ever since it was first made available through the pharmaceutical companies.

Administration by intramuscular injection of Procaine Penicillin G suspensions results in therapeutic Penicillin blood levels for periods greatly in excess of those hitherto obtained with other dosage forms. *Extensive clinical investigations established this* before the new salt was commercially produced and introduced.

Procaine Penicillin G Crystalline-Pfizer is available in sterile suspensions suitable for intramuscular injection. Chas. Pfizer & Co., Inc., 81 Maiden Lane, New York 7, N. Y.

*When more than one
form of anemia is
present or suspected*

LIAFON

SQUIBB
desiccated liver
ferrous sulfate
ascorbic acid
folic acid

Cartwright¹ points out that "the absence of certain dietary essentials retards erythrocyte formation and the addition of these essentials to diet accelerates it." Liafon supplies four erythropoietic essentials in one capsule:

WHOLE LIVER (desiccated) — with nothing but the water removed — to supply the secondary antianemia fractions which have been proved to be essential experimentally and clinically.

FERROUS SULFATE (exsiccated) — to supply the most easily tolerated, best absorbed and most completely utilized essential for specific therapy of iron deficiency anemias.

ASCORBIC ACID — which is intimately associated with red blood cell formation — which aids in the absorption and utilization of iron — and which is often a prerequisite in anemias complicated with C avitaminosis.

FOLIC ACID — for bone marrow stimulation and to complete the development of red blood cells — as specific therapy for macrocytic anemias of malnutrition, pregnancy, pellagra and sprue.

1. Cartwright, G. E.: *Blood* 2:111 (March) 1947.

SQUIBB

Liafon is
supplied in
bottles of
100 and 1,000

EACH LIAFON CAPSULE CONTAINS:

DOSAGE EQUIVALENTS

	3 capsules daily	6 capsules daily
Desiccated Liver 0.5 Gm. (Approx. equivalent to 2 Gm. whole fresh liver)	6 Gm. fresh liver	12 Gm. fresh liver
Ferrous Sulfate Exsiccated . . . 2.0 gr. (Approx. equivalent to 2.85 gr. ferrous sulfate or 36 mg. elemental iron)	8.5 gr. ferrous sulfate	17 gr. ferrous sulfate
Ascorbic Acid 50.0 mg.	150 mg.	300 mg.
Folic Acid 1.67 mg.	5 mg.	10 mg.

4 Convenient Dosage Strengths

The consensus of clinicians who have had considerable experience with aurotherapy is that gold, despite its recognized toxicity, appears to be the most effective single agent available for the treatment of active rheumatoid arthritis.

Solution of Myochrysine is supplied in 1 cc. ampuls containing 10, 25, 50, and 100 mg. of gold sodium thiomalate, equivalent to 5, 12.5, 25, and 50 mg. of gold.

The content of gold sodium thiomalate is indicated in large numerals on the label of each ampul, in order that the physician may readily distinguish the desired dosage strength.

"safety zone"

therapy of
PEPTIC ULCER

The gastric pH range which is safe for the peptic ulcer patient lies between 4 and 5. In this "safety zone" there is neither pepsin activity (which may cause continued erosion or bleeding) nor stimulation of excess acid production.

Tricreamalate, a balanced blend of aluminum hydroxide gel with magnesium trisilicate reduces acidity within the stomach to pH 4 to 5. Absolute neutrality is not reached. Hence, there is no stimulus to "acid rebound" and no alkalosis.

Through the formation of a protective coating and a mild astringent effect, nonabsorbable Tricreamalate is soothing to the irritated gastric mucosa, relieves gastric pain and heartburn, and aids in healing peptic ulceration as well as in preventing recurrence.

THE HIGH-PROTEIN INFANT FOOD

The incidence of mild protein deficiencies in children, predisposing toward infections and edema, is reported^{1,2} much greater than generally realized. Infant and adolescent requirements—not only for tissue repair and maintenance, but also for growth—are much higher than in adulthood.³ To insure adequate protein intake in infancy, DRYCO—Borden's high-protein infant food—is ideally suited as a basis for formula building. It furnishes *all the essential amino acids*. Its low fat content minimizes gastro-intestinal upsets due to fat intolerance, while its intermediate carbohydrate content lends itself for prescription with or without added carbohydrate. Quickly soluble in cold or warm water, DRYCO contains adequate vitamins A, B₁, B₂ and D, plus essential milk minerals.

*Prompt
Relief of
Anorectal
Pain*

'anusal'*

hemorrhoidal suppositories

Hemorrhoids can be considered part and parcel—if, indeed, not a penalty—of the modern tempo of living. It has been said that more than 50% of all people in middle life either have or have had hemorrhoids.

In the palliative treatment of this common disorder or in simple, uncomplicated rectal irritations and inflammations 'Anusol' Hemorrhoidal Suppositories have been time-tried and have proved their clinical value over a period of many years.

The prompt and soothing relief afforded by 'Anusol' Hemorrhoidal Suppositories is due to the emollient, mildly astringent, and antiseptic actions provided by the components of the well balanced formula. The effective blending of purely local actions quickly allays anorectal pain and discomfort without evoking undesirable systemic by-effects.

*A pleasant relief
from Hay Fever*

It's one thing to provide relief from hay fever; it's another to provide relief without inducing unpleasant reactions. TRIMETON, an antihistaminic of great potency and efficacy exhibits an unusually low incidence of side actions. For example, in an analysis of 726 cases where TRIMETON was employed, only two discontinued the drug because of drowsiness.

Trimeton

(brand of propenpyridamine)

completely different in chemical composition, represents a significant improvement among antihistaminic preparations: it is highly potent, it provides relief for approximately 90% of hay fever sufferers and is well tolerated. TRIMETON may be prescribed as an adjunct to the treatment of all the allergies responding to antihistaminic therapy. The relief obtained from this therapy will be rapid and pleasant.

DOSAGE: TRIMETON Tablets, 25 mg. t.i.d.

PACKAGING: TRIMETON, 1-phenyl-1-(2-pyridyl)-3-dimethylaminopropane is available in 25 mg. tablets, scored, in bottles of 100 and 1000.

changing from PZI to GLOBIN INSULIN

When protamine zinc insulin treatment is complicated by post-prandial hyperglycemia, nocturnal insulin reaction, protamine sensitivity, or other difficulties, a change to Globin Insulin often results in the desired improvement. The change is achieved in three steps:

1. THE INITIAL CHANGE-OVER DOSAGE: The first day, 30 minutes or more before breakfast, give a single dose of Globin Insulin, equal to $\frac{1}{2}$ the total previous daily dose of protamine zinc insulin or of protamine zinc insulin combined with regular insulin. The next day, dose may be increased to $\frac{2}{3}$ former total.

2. ADJUSTMENT TO 24-HOUR CONTROL: Gradually adjust the Globin Insulin dosage to provide 24-hour control as evidenced by a fasting blood sugar level of less than 150 mgm. or sugar-free urine in the fasting sample.

3. ADJUSTMENT OF DIET: Simultaneously adjust carbohydrate distribution of diet to balance insulin activity; initially 2/10, 4/10 and 4/10. Any midafternoon hypoglycemia may usually be offset by 10 to 20 grams carbohydrate at 3 to 4 p.m. Base final carbohydrate adjustment on fractional urinalyses.

Most mild and many moderately severe cases may be controlled by *one daily injection of 'Wellcome' Globin Insulin with Zinc*. Vials of 10 cc.; 40 and 80 units per cc. Developed in The Wellcome Research Laboratories, Tuckahoe, New York. U.S. Pat. 2,161,198. Literature on request.

FOR THE DAY-TO-DAY NEEDS

of our aged and retired colleagues in the medical profession, the Physicians' Home provides material assistance, quietly given—gratefully received.

Your regular contributions, special gifts and bequests, within and outside the profession, assure that this work will continue and expand.

The security which the Physicians' Home is able to extend to its guests is a splendid testimony to the generosity—year-by-year—of the members of the Medical Society of the State of New York.

ADVANCES IN THERAPY

R_x Cabbages

Once upon a time a blacksmith fell ill of a strange disorder. After eating a dish of cabbage, he fully recovered. Some weeks later his neighbor, the tailor, developed similar symptoms; cabbage was promptly administered but, alas, the tailor died. A would-be scientist in the village concluded that cabbage was a specific for the disorder, but *in blacksmiths only*; for tailors he pronounced it worthless and even dangerous.

The physician of today requires dependable evidence for the usefulness of his therapeutic agents. He also insists upon *uniform, dependable purity* for every drug that he uses.

For over 80 years physicians have relied on the *uniform, dependable purity* of Mallinckrodt products.

Have a Coke

The pause that refreshes

1 Precise Administration
2 Minimum Irritation
3 Complete Absorption
4 Sustained Action

For oral use: 0.2 mg. tablets—vials of 30, bottles of 100 and 500; 0.1 mg. tablets—bottles of 100 and 500 • For intravenous injection: 1 cc. ampuls, 0.2 mg.

Purodigin has these advantages:

PRECISE DOSAGE: Purodigin (Digitoxin Wyeth) is absolutely uniform . . . standardized by weight, prescribed by weight.

LACK OF IRRITATION: Purodigin is concentrated—dosage is only *one thousandth* that of digitalis leaf. Nausea is rare.

ABSORPTION of Purodigin is virtually complete. Almost no irritating residue is left in the digestive tract.

SUSTAINED ACTION: Purodigin remains in the body as long as digitalis.

Try Purodigin—especially for those patients who do not easily tolerate digitalis leaf. Without interrupting treatment, simply prescribe 0.1–0.2 milligram Purodigin in place of 0.1–0.2 gram digitalis.

CHARLES B. TOWNS HOSPITAL

293 CENTRAL PARK WEST • NEW YORK 24, N. Y.

Exclusively for ALCOHOLISM and DRUG ADDICTION

We regard alcoholism and the varied drug habits, including barbiturism, as both physiological and psychological sicknesses. Our treatment is a hospital procedure which eliminates craving by a method of detoxication and quickly restores normal body functions. Following this our psychological approach to the problem has proven most successful.

We have perfected the treatment of drug addiction over a period of forty years. It is now generally accepted as standard. It is completed within a definite period, at a fixed charge, and entails a minimum of discomfort. The patient is assured of absolute privacy.

Our advertisement also appears in the A.M.A. Journal.

THE HUDGINS CANNULA

(R) 2392045

For Hysterosalpingography

A screw-type, self-retaining, indwelling cervical cannula with a ball valve to retain the contrast medium. The head has a luer slip opening which accommodates an introducing stem. The stem is easily replaced by a hollow syringe stem; a syringe is then attached, the contrast medium introduced, and the syringe stem removed. The patient is instructed to be up and about for about ½ hour, during which time muscular contractions of the uterus work the medium out into the tubes; the plate is then taken.

FEATURES IN DIAGNOSIS

- Provides a **simplified technic** which can be done in the office.
- **Less pain and trauma**—no tenacula required.
- **Single plate technic** completed in 1 to 2 hours.
- **Functional obstructions** of tubes fewer and more easily overcome.
- **Clearer films**—fewer instrument shadows—better orientation. Permits use of **lighter opaque media**—more easily absorbable.
- **Safe**—keeps operator out of the x-ray field.

E-490 Hudgins Cannula Outfit (stainless steel) with regular conical cannula head (E-940/H) for the multipara, syringe stem (E-942), introducing stem (E-944) and an extra valve ball and spring; with comprehensive instructions for use. **Each \$15.00**

E-941 As above, but with small conical cannula head (E-941/H) for the nullipara. **Each \$15.00**

THE PROPERTIES OF BARLEY* IN CONVALESCENT DIET

There are times when the ready digestibility of barley makes it a desirable adjunct to the convalescent diet.

In such cases beer as a mealtime accompaniment is often suggested by the physician.

The advantages under these circumstances of a beer which is brewed *solely* from barley-malt are obvious. Such a beer is Trommer's White Label Premium Beer. It is brewed after an old-world formula which permits the use of only carefully selected hops and fine barley-malt. *No other grain is used.*

The result is a beer pleasantly light and appealing to the taste.

TROMMER'S

White Label
Premium BEER

**Malted barley is rich in an enzyme which digests starch in the production of maltose.*

(From "Accepted Foods and Their Nutritional Significance")
